Maryam Abdul Rehman

Flutter Developer | Dart | Python | .NET | Cross-Platform Mobile Apps

maryamabdulrehman303@gmail.com | 03707746367 | LinkedIn |
GitHub | Lahore, Pakistan

Professional Summary

Flutter Developer with hands-on experience building 6+ cross-platform mobile applications. Proficient in Dart, state management (setState, Provider), RESTful API integration, asynchronous programming, Firebase, and third-party package management. Additionally, skilled in backend development using .NET (ASP.NET Core, Entity Framework) and Python (Flask, ML). Experienced in full-stack development with a strong focus on user-centric design, real-time features, and smooth UI/UX. Currently completing a BS in Software Engineering (graduating 2026) and seeking a Flutter developer role to build innovative, high-quality mobile solutions.

Technical Skills

Mobile Development: Flutter, Dart, Cross-Platform UI, State Management (setState, Provider, BLoC basics), Asynchronous Programming, RESTful API integration, Firebase, SQLite, UI/UX, Figma
Backend Development: .NET, ASP.NET Core Web API, Entity Framework Core, JWT Authentication, REST APIs, Python, Flask, Microservices, Machine Learning (scikit-learn)
Dev Tools & Practices: Git/GitHub, VS Code, Android Studio, OOP, Agile Methodologies, Version Control, Postman, Swagger

Education

BS Software Engineering, PMAS Arid Agriculture University - Rawalpindi, PK 2022 – 2026

Experience

Flutter Developer Intern – Devmind (Remote) 2025

- Developed and maintained cross-platform mobile applications using Flutter and Dart, integrating RESTful APIs and third-party packages to enhance functionality.
- Collaborated with a remote team using Agile methodologies, implementing new features, fixing bugs, and optimizing code for better readability and performance.

Projects

Mind2Deck — AI Presentation Generator (Final Year Project)

ASP.NET Core · C# · SQL Server · Azure Blob · Stable Diffusion · NLP

- Engineered an end-to-end AI web platform that automates slide generation from a user-provided topic, reducing presentation creation time by 70%.
- Integrated NLP models for structured content generation and Stable Diffusion for AI image synthesis, producing professional-quality PPTX, image, and video exports.
- Architected cloud storage using SQL Server and Azure Blob to handle multi-format assets at scale, supporting concurrent sessions for students and professionals.

Foodie — Full-Stack Food Ordering Application

Flutter · Provider · .NET Core Web API · JWT · SQLite

- Developed a complete Flutter frontend with Provider state management, enabling category-based browsing, persistent cart, and checkout flow with multiple payment methods.
- Built a secure RESTful backend using ASP.NET Core Web API with Entity Framework Core, implementing JWT-based authentication and BCrypt password hashing.
- Resolved cross-platform networking challenges including CORS and firewall configuration to ensure reliable communication between mobile client and backend on physical devices.

ExpenseTracker — Smart Expense Tracker with ML

Flutter · ASP.NET Core · Python Flask · JWT · SQLite · scikit-learn

- Built a Flutter frontend with a secure ASP.NET Core API and a Python Flask microservice that automates expense categorization using a TF-IDF + Naïve Bayes model.
- Implemented JWT-based authentication, interactive pie charts for spending insights, and time-based filtering (daily/weekly/monthly) for comprehensive budget management.
- Designed a clean three-tier architecture (mobile, REST API, AI microservice) to ensure scalability and maintainability.

WallPix — Wallpaper App

Flutter · Dart · Pexels API · Asynchronous Programming · Caching

- Built a wallpaper app integrating the Pexels API, featuring infinite scrolling with lazy loading to seamlessly browse over 10,000 high-quality images.
- Optimized image loading with advanced caching strategies, achieving sub-200ms load times and reducing data usage significantly.
- Applied asynchronous programming patterns to prevent UI thread blocking, delivering jank-free scrolling even on mid-range Android devices.

Quiz App

Flutter · Dart · OOP · Provider

- Designed a multi-screen quiz application with splash, quiz, and results screens, using Object-Oriented Programming principles for a scalable question model.
- Implemented dynamic score calculation and percentage-based evaluation with real-time feedback for each answer, increasing user engagement.
- Managed application state using Provider for complex interactions and setState for local UI updates, creating a responsive user experience.

Calculator (Python)

Python · Error Handling · Control Flow

- Built a command-line calculator supporting addition, subtraction, multiplication, division, exponentiation, and modulus operations.
- Implemented robust error handling to gracefully manage division by zero and invalid operator inputs, preventing application crashes.
- Converted user inputs to appropriate numeric types and displayed the result along with its data type for clarity.

Number Guessing Game (Python)

Python · Random Module · Loops · Conditional Logic

- Created an interactive guessing game where the computer picks a random number (1-100) and the user guesses it within 7 attempts.
- Provided real-time hints ("Too high" / "Too low") after each guess to guide the player.
- Incorporated attempt limits and revealed the secret number upon failure, adding a challenge element.

Certifications

- **Flutter Development Bootcamp** – Simplilearn
- **Python Programming Certification** – Simplilearn
- **Machine Learning Certification** – Simplilearn
